Reference

The airfield restaurant uses duct nozzle diffusers from TROX HESCO Schweiz AG as style features.

BRIEF DESCRIPTION

The restaurant at the Birrfeld regional airfield in Lupfig AG, was reopened in March 2014 following complete renovation. The installation of ventilation in the filigree building with fairly low rooms proved to be a challenge. The renovation of the restaurant was carried out in a second stage. Today, the entire premises are wheelchair-accessible and the restaurant can accommodate up to 80 people. There is a meetings room and training rooms that can be adapted flexibly depending on the event.

TROX HESCO SCHWEIZ AG SOLUTION

TROX HESCO Schweiz AG advised the planner on various air supply options for the project, and recommended the duct nozzle diffuser, as well as supporting the planner up to the tendering phase. TROX HESCO Schweiz AG also advised the contractor with regard to the design, and implemented the project accordingly.
